                             The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell producting a profile of expressed polynucleotides in the plant cell production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

```
The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5 5

3-beta hydroxylase, Riboflavin specific deaminase, Ethylene response factor, Acyl-CoA thioesterase II, ABC transporter GCN20-like, Pedyl-CoA thioesterase II, ABC transporter GCN20-like, Pedyl-CoA thioesterase II, ABC transporter and MRP4 ABC transporter. PMPND ABC transporter and MRP4 ABC transporter. PMPND ABC transporter and mRP4 ABC transporter. The nucleic acid fragments may be used to create transgenic plants where the polypeptides are present at higher or lower levels than normal or in cell types or in developmental stages in which they are not normally found. The polymucleotides can be used as probes for genetically and physically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length polymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used trom the mutation problase containing the mutation products generated from the mutation population using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or produce polyclonal or monoclonal attuin cells or in vitro in cell for detecting the polypeptides in situ in cells or in vitro in cell cextracts. The present sequence encodes a plant metabolism protein (or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fragment).

P-PSDB; ADM94206

New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.

Example 3; SEQ ID NO 5; 186pp; English

The invention relates to an isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide having GTP cyclohydrolase incleotide sequence encoding a polypeptide having GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing a coll with the comprising the polynucleotide operably linked to at least one regulatory sequence, transforming a cell with the comprising the recombinant DNA construct.

The polynucleotide and resentatory sequence, transforming a plant cell with the polynucleotide and resentant of the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid consent and assembled contigs encoding plant metabolism proteins chosen from GTP cyclohydrolase [1/3,4-dihydroxy-2-but amporter]. Also disclosed as new are nucleic acid consent and assembled contigs encoding plant metabolism proteins chosen from GTP cyclohydrolase. Nucleus PNA CONSTRUCT AND CONSTRU fragment)

The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels and in the method or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substract from the pathway, or degrades pathway substracts or products. The methods uses copally diphosphate synthase, 3beta-hydroxylase, 2-xidase, phytone synthase, C-20 oxidase, and a 2beta-hydroxylase polynuclectides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of germination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  268

                                                                                                                                                                                                The invention relates to control of gibberellin (GA) levels in plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in apropriate compound when conditions are favourable. The method is agricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce to premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase 2 cDNA

The invention relates to a DNA encoding a plant protein having applored in 2-oxidation activity, comprising ADK000079 or ADK00081 or a DNA encoding a protein comprising ADK000800r ADK00082, where one or more amino acid residues are substituted, deleted, added, and/or inserted or DNA hybridising to ADK00079 or ADK00081 under stringent conditions. The DNA is also selected from an antiseane RNA, a DNA encoding an RNA having the ribozyme activity that specifically cleaves the transcript of the DNA above, a DNA encoding an RNA that suppresses the expression of the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New DNA encoding plant-derived proteins having gibberellin 2-oxidation activity, useful for the inactivation of plant gibberellins and plants whose gibberellin activity has been modified by regulating the expression

                                                      involved in plant resistance or response to pathogenic infection. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

the expression of the DNA above in plant cells by co-suppression. Also included are a protein encoded by the DNA above, a vector harbouring a DNA selected above, a transformed plant cell harbouring the DNA above or the vector, a transgenic plant cell harbouring the DNA above or the vector, a transgenic plant comprising the transformed plant cell or obtained from the transgenic plant, a propagation material plant, a plant growth suppression comprising the DNA above as an active pranction, a method of suppressing plant growth and a method of promoting plant growth. The gibberellin 2-oxidase catalyses the conversion of gibberellin A29, which is further metabolised to gibberellin A29. Which is further inactivation of plant gibberellin and plants whose gibberellin activity has been modified by regulating the expression of these DNAs. The present sequence encodes gibberellin 2-oxidase, OsGA20x3.
  DNA encoding an RNA that suppresses
  or a
  plant cells via RNAi,

The invention further comprises antisense RNA sequences, a vector. transformed plant cells, antibodies and proteins, all related to the novel plant DNA sequences of the invention. The novel DNA is preferably derived from a rice-genome database. The invention further provides a method for determining the transcription regulatory regions of the rice genome. The novel DNA is useful for controlling the expression of a gene in a plant and for producing a modified plant with desired and different characteristics. The plant DNA and method enables the acquisition of many

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        255
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   transcriptional-regulatory regions. This polynucleotide represents a DNA sequence taken from a rice genome clone library for use in the invention. Note: This sequence is not shown in the specification. It has been retrieved from a sequence listing in electronic format from the Japanese Patent Office. The invention claims DNA sequences of SEQ ID Nos 1 to however, the sequence listing only provided the DNA sequences of SEQ ID Nos 1 to Nos 1 to 3032.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           59

Also included are a vector comprising the polynucleotide, a recombinant DNA construct comprising the polynucleotide operably linked to at least one regulatory sequence, transforming a cell with the

progruction a plant (comprising transforming a plant cell with the producing a plant (comprising transforming a plant cell with the producing a plant (comprising transforming a plant from the transformed plant cell), a plant comprising the recombinant DNA construct. And a snew are mucleid acid the recombinant DNA construct and a snew are mucleid acid construct. And comprising plant metabolism proteins construct from GTP cyclophydrolase II/3,4-dihydroxy-2-buteanone-4-phosphate Synthase, Dioxygenase, Ent-Kaurene Synthase, Ethylene response actors, Acyl-Cob thiosesterase II, ABC transporter GRAPG-like, P. Glycoprotein I. P-Glycoprotein 3, P-Glycoprotein AFEGP, P-Glycoprotein I. P-Glycoprotein 3, P-Glycoprotein AFEGP, P-Glycoprotein GTP mucleic acid fragments may be used to create transgenic plants where the polypeptides are present at higher or lower levels than normally cell types or in developmental stages in which they are not normally controlly mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as probes for genetically and physically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length containing restriction endonuclease-traited genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes against PCR amplification products generated from the mutation mopulation using the mutation tag sequence primer. The peptides can also be used to immuniae animals to produce senonic bid minimals and progeny of a defined genetic cross against be mutation transmay also be used as hybridisation probes against to many products generated from the mutation many products generated from the mutation many products generated from the mutation many products are products or mutation which an arbitrary products and progeny of a defined genetic cross and products generated from the mutation products and pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or proteins comprising the amino acid sequences. Antibodies are useful for detecting the polypeptides in situ in cells or in vitro in cell extracts. The present sequence encodes a plant metabolism protein (or

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                           US-10-670-454-2

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length libraties construction: Temple G.

Genoscope members carried out sequencing and annotation: Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 (bases 1 to 1365)

Direct Submission

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Cleptet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences). 5 prime and 3 prime are assembled with Phrap.

Submitted (18-NoV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V. Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Wunich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

If you are interested in getting corresponding physical clones,
these are publicly available from ZmDB and may be found by BLAST
searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR,
www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the
maize cDNA sequences is either Virginia Walbot, Stanford or Pat
Schnable, Iowa State, then clones may be requested from ZmDB:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            513

The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGY INRA : Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

Incompathogen.free Solanum tuberosum var. Shepody, clone |
1756, were inoculated with 5 ul of Phytophthora infestans (A2-mating type), through 2 puncture wounds 3 cm apart. The tubers were incubated 1 minute to allow inoculum absorption. The infection area was outlined for future collection reference. Surface slices were sampled from the tubers at 1 day, 5 days, 7 days, 11 days and 14 days post-infection. All samples were pooled and used for RNA isolation and library construction. A normalized library was constructed following a modified protocol of Bonaldo et al. (1996. Genome Research 6: 791-806)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           362

/ CLOUE="Vector: palescript II SK+; Site I: ECORI; Site_2:
XhoI; The CDNA library was constructed from mRNA isolated
from unexpanded leaves and the shoot tips of 2 week old
seedling from the cultivar Williams. The 2 week old
seedlings were salt stressed in a solution of 500mM NaCl
for 3 days prior to harvesting. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The CDNA fragments were
directionally cloned into the ECORI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments were
transformed into blub host cells (GibcoBR). This library
was constructed in the laboratory of Dr. Randy

/note="Vector: pSPORTI; Site_1: SalI; Site_2: NotI; This cDNA library was constructed_from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The CDNA fragments were directionally cloned into the Not I -Sal I restriction site of the pSPORTI vector. The ligated cDNA fragments were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Email: est@watson.wustl.edu
When it has been determined, an EST from the other end of this
clone is listed in the 'Other ESTs on clone' field. This clone is
available through: Biogenetic Services, 801 32nd Ave. Brookings, SD
57006 USA (phone: 800 423 4163; email: info@biogeneticservices.com)
Insert Length: 1472 Std Error: 0.00
